05	What the specifications show
06	Curiosities of the drone war
A	Model sheets — specifications and photographs
B	Sources

4,5 mln+

FPV Ukraine planned to buy for 2025; in 2026 factories could make 7–20 million

413

new UAS codified by Ukraine’s defence ministry from January to July 2026

~3200 km

Ukraine’s longest strike flight — Novy Urengoy, 9 September 2026, a plywood FP-1

2800

jet Gerans in the August 2026 salvos — there were 350 in June

9 tys.

Shaheds and Gerberas downed by Sting interceptors by June 2026

2292 \$

price of a WIY Strila interceptor after the January 2026 cut. A Geran costs 30–50 thousand

01

Scope, sources, caveats

This atlas organises the principal uncrewed systems (UxS) used on the Ukrainian front and other active theatres from January to 11 September 2026. It is not a register of every design: Ukraine’s MoD alone has codified 413 systems since the start of 2026, and more than 500 manufacturers operate in the country. The aim is a canon — the models that define a class, and their technical data.

Figures come from open publications: Australian Army Research Centre (September 2026), IISS Strategic Dossier UAV 2026, ISW, CSIS, BBC Verify, Reuters, Militarnyi, Defence24, DroneXL, UN reporting on Sudan, AeroCorner, KSE Institute. Parameters (range, payload, speed, dimensions) often diverge among the maker, intelligence and the field — we give ranges and mark figures that are claims, not combat measurements.

“Drone” here covers aerial UAS, surface USVs and ground UGVs. The line between a kamikaze drone and a cruise missile (Peklo, Palianytsia, FP-5 Flamingo) is conventional; we include them because that is how they function in 2026 doctrine. Photographs are illustrative, from open sources — press, Wikimedia, manufacturers — and do not always show the exact serial of the version described.

TYPE	DOMAIN	RANGE	ROLE
FPV kamikaze (radio)	air	5–25 km	Precision attack on infantry, trenches and vehicles in the contact zone. The most numerous class of the drone war.
Fibre-optic FPV	air	15–65 km	Jam-resistant. Early 2026 typical reach 15–25 km; later 40–50 km, on the Russian side up to about 65 km.
Fixed-wing FPV	air	25–100 km	A wing instead of rotors: more payload and range, a different radio signature. Example: Russia’s Molniya-2.
Heavy multirotor bombers	air	10–20 km	Hexa- and octocopters dropping mines and mortar rounds (10–15+ kg), mostly at night. Reusable. Vampire (SkyFall), Lucky Strike (PG Robotics).
Commercial ISR	air	3–15 km	DJI Mavic, Autel and derivatives — artillery adjustment, close reconnaissance, the squad’s eyes.
Tactical fixed-wing ISR	air	40–300 km	Hours on station, thermal imagers, fire direction. Shark, Leleka, Furia, Orlan-10.
MALE / HALE / UCAV	air	hundreds–thousands of km	Persistent reconnaissance and armed patrols: TB2, Akinci, Reaper, Wing Loong, Hermes 900.
Loitering munitions	air	10–90 km	Holds over an area, then dives after identification. Lancet, Switchblade, RAM-2X, Warmate, Harop.
Medium-range strike	air	50–500 km	The bridge between FPV and deep strike. FP-2, RAM-2X — logistics and air defences in the rear.
Deep-strike / OWA	air	500–3,000+ km	One-way attacks into the deep rear: Shahed/Geran, Liutyi, FP-1, Flamingo.
Jet drones and missile-drones	air	300–1,000+ km	400–800+ km/h. Geran-3, Palianytsia, Peklo — harder to intercept.
Interceptor drones	air	local / 3–9 km ceiling	A cheap answer to Shaheds and scouts. WIY Strila and SPYS, SkyFall P1-SUN, Sting (Wild Hornets) — usually USD 1–3 thousand apiece.
Decoys	air	salvo-dependent	Gerbera — saturating air defences with a cheap foam wing, sometimes carrying a small warhead.
Uncrewed surface vessels	sea	800–1,500 km	Magura, Sea Baby — attacks on fleets and bridges, Shahed launches from the sea, missiles from the deck.
Uncrewed ground vehicles	ground	3–12 km	Logistics, casualty evacuation, mining, assault. Ukraine: 16,600 missions in June 2026.
Stealth UCAV	air	operational / strategic	Low-observable flying wings: China’s GJ-11, Turkey’s Kızılelma.

0 2

The Ukrainian front: 2026 layers

The 2026 drone war has layers, not a single “drone”. At ground level: millions of radio and fibre FPV (15–65 km), heavy bombers of the Vampire/Baba Yaga type (10–20 km, 10–15 kg) and commercial Mavics as the squad’s eyes. Higher: ISR monoplanes — Leleka, Furia, Shark, PD-2 on the Ukrainian side, Orlan-10, SuperCam and ZALA on the Russian — cueing artillery and loitering munitions.

Loitering munitions: Lancet-3 remains Russia’s most effective “sniper” (40–70 km, 3–5 kg warhead). Ukraine answers with RAM-2X, Poland’s Warmate and the US Switchblade 300/600 — the last is more precise, but an order of magnitude dearer, so not massed. In the tactical rear FP-2 and related mid-strike drones dominate.

At sea Magura V5/V7 and Sea Baby pushed the Russian fleet out of the western Black Sea. On land robots — Ratel and kin — flew 16,600 logistics and casualty-evac missions in June 2026. WIY Strila, SkyFall P1-SUN and Sting interceptors gave a cheap answer to nightly salvos: two thousand dollars versus thirty to fifty thousand for a Geran. PG Robotics Lucky Strike bombers come home after the drop — one airframe has 135 sorties to its name.

0 3

Deep strike and jets

The signature of 2026 nights remains the Geran-2 (Shahed-136): a 3.5 × 2.5 m delta, 200 kg, 185 km/h, 1,000–2,500 km, 50–90 kg warhead. The Alabuga plant cites about 2,800 a month. Alongside fly Gerberas — foam decoys — and, increasingly, jet Geran-3/5 (450–600 km/h). In August 2026 the salvos held 2,800 jets, against 350 in June.

Ukraine’s answer is not one type. Liutyi (AN-196) — 4.4 × 6.7 m, about 300 kg, 50–75 kg warhead, 1,000–2,000 km — hits refineries. FP-1 (Fire Point) is cheaper (about USD 55 thousand) and longer-legged: 1,600 km baseline, 2,700 km in the ER variant,

on 9 September 2026 Novy Urengoy at about 3,200 km. Palianytsia UAV-290 (3.5 × 1.7 m, 350 kg, 100 kg, 800 km/h, 650 km) and Peklo fill the jet gap. FP-5 Flamingo (6 t, 1,150 kg, 3,000 km) is already a cruise missile.

0 4

Theatres beyond Ukraine

The Middle East is the cradle of the Shahed and the Harop. The Houthis have shot down 17–19 MQ-9s since 2023. Hezbollah in 2026 flies fibre FPV with PG-7 warheads. The United States answered with LUCAS — a reverse-engineered Shahed-136 — combat debut 28 February 2026 against Iran.

Africa is a market for TB2, Akıncı, Wing Loong II and CH-4. Sudan: SAF flies Akıncı and Iranian Mohajers. The Sahel — Turkish and Chinese MALE without MTCR restrictions. East Asia: GJ-11 in PLAAF service, teaming with the J-20; Taiwan rehearses a cheap-OWA “hellscape” on the pattern of Ukraine and the Strait of Hormuz.

NATO still rests on the Reaper (4,760 kg, 20.1 m, Hellfire), but is learning mass. Switchblade 600 costs about USD 170 thousand — the Lancet 20–35 thousand. Gauntlet, LASSO and LUCAS are meant to close that gap. Turkey exports TB2 and Akıncı to 30+ countries; Kızılelma (Mach 0.9, 8.5 t) is the next layer, not a front-line tool.

0 5

What the specifications show

Dimensions and masses explain doctrine. A 10-inch FPV weighs 1–3 kg and costs a few hundred dollars — hence millions of units. A 12 kg Lancet with a 3 kg warhead is enough for a howitzer. A 200 kg Shahed with a 50 kg warhead — for a transformer. Palianytsia at 350 kg and 100 kg at 800 km/h — for a target a Geran will not reach in time. Flamingo at 6 t and 1,150 kg — no longer a drone, but a missile with a different production pedigree.

The second axis is time and altitude. Orlan-10 hangs for 16 hours at 5 km and calls a Lancet. A Mavic lasts 45 minutes at 120 metres and calls an FPV. A Reaper lasts 27 hours at 15 km on SATCOM — and is shot down when it strays over the Houthis. The 2026 war rewards cheap mass at low altitude, not an expensive airframe up high.

0 6

Curiosities of the drone war

Palianytsia is a Ukrainian loaf — and a shibboleth: whoever cannot say it is “the other”. Luch Design Bureau gave the name to a 3.5 × 1.7 m, 350 kg, 800 km/h missile-drone. Baba Yaga, conversely, is the name Russians gave Ukrainian night bombers: the fairy-tale witch flies in a mortar — and SkyFall’s Vampire drops mortars too.

Soldiers nicknamed the P1-SUN “Pisun”, from the spelling. By June 2026 Sting had downed about 9,000 Shaheds and Gerberas; in August it set an altitude record of 7,472 m. MP Maryan Zablotskyy flew an interceptor first from his office, then from abroad — 2,000 km in all. In April a Sting launched from a Magura boat: eighteen on deck, the first floating anti-Shahed battery. In September 2026 HUR showed a Katran catamaran working interceptors alongside F-16s.

On 9 September 2026 a plywood FP-1 reached Novy Urengoy, about 3,200 km from Ukraine — Russia’s gas capital. On 6 July another FP-1 hit the Omsk refinery after more than twelve hours. A USD 55,000 machine, cheaper than a family car. The Gerbera foam decoy costs a fraction of the missile that shoots it down: that is the economics of saturation. LUCAS, the American copy of the Shahed-136, made its combat debut on 28 February 2026 — against Iran, the author of the original.

PG Robotics’ Lucky Strike comes home: 50–70 sorties on average, a record of 135. Strila dropped a thousand dollars in a month once WIY localised the electronics. The V2U flies with no radio — there is no channel to jam. The Houthis have shot down 17–19 Reapers since 2023, each worth tens of millions. Magura V7 was the first uncrewed boat to down crewed Su-30s. The 2026 war is full of such inversions: cheap eats expensive, plywood hits Siberia, a hunter boat defends Kyiv.

The loaf a Russian cannot say

Palianytsia is a loaf — and a shibboleth. Luch gave the name to a 3.5 m, 800 km/h missile-drone with a 100 kg warhead.

P1-SUN, nicknamed “Pisun”

From the spelling. SkyFall says the family has downed over 10,000 Russian machines; P1-SUN itself more than 3,000 Shaheds in 2026. About USD 1,000 apiece.

7,472 metres

August 2026: a Wild Hornets Sting downed a scout at that height. Then a world record for drone-on-drone combat. Catalogue ceiling: 7 km.

A pilot from the office, 2,000 km away

MP Maryan Zablotsky first flew an interceptor from his office, then from abroad. Sting and P1-SUN can be flown over Starlink from another continent.

A floating air-defence battery

April 2026: a Sting launches from a Magura — eighteen on deck. September: a Katran with interceptors works with F-16s in the defence of Kyiv.

Plywood in Siberia

An FP-1 at USD 55,000 — cheaper than a family car — reached Novy Urengoy on 9 September 2026, about 3,200 km from Ukraine. Two months earlier another hit Omsk after twelve hours.

One hundred and thirty-five sorties

The Lucky Strike record from PG Robotics. One bomber averages 50–70 missions. Not a kamikaze — a thrifty robot that comes home.

A copy against its author

LUCAS is an American reverse-engineering of the Shahed-136. Combat debut: 28 February 2026, against Iran. The Gerbera foam decoy costs a fraction of the missile that shoots it down.

A

Model sheets

Each sheet lists open-source dimensions and performance. Figures often diverge — ranges are given. Photographs are illustrative.

COMMERCIAL ISR · 2022–2026

DJI Mavic 3T / 3E

Squad-level ISR and fire adjustment

China (DJI) · both sides on the UA front; irregular forces worldwide

LENGTH	347 × 283 × 108 mm (unfolded)
WINGSPAN / BEAM	380 mm diagonal
MTOW	920 g (3T)
PAYLOAD	EO/IR, no warhead
MAX. SPEED	76 km/h (Sport)
RANGE	8 km (CE) / 15 km (FCC)
ENDURANCE	about 45 min
CEILING	6,000 m AMSL
POWERPLANT	4× brushless motors, Li-ion
GUIDANCE	GNSS + vision + OcuSync radio
UNIT COST	about USD 4–5 thousand (civilian)

The war’s most common tactical scout. A 4/3" daylight camera, a telephoto and a 640×512 thermal imager. Civilian kit in a military role: both sides buy it in bulk, swap antennas and add boosters. Factory range 8–15 km; with a relay it can double.

UKRAINIAN FRONT · MIDDLE EAST · AFRICA · EXPORT AND PROLIFERATION

FPV KAMIKAZE (RADIO) · 2023–2026

10-inch FPV (class)

“drone infantry”

Kamikaze in the contact zone

Ukraine and Russia — hundreds of workshops · AFU, SBU, HUR; Russian forces, Rubikon

WINGSPAN / BEAM	10" frame (diagonal ~45 cm)
MTOW	1.2–2.8 kg with warhead
WARHEAD	0.5–2.5 kg (PG-7, HE-FRAG, TB)
MAX. SPEED	100–160 km/h
RANGE	5–25 km (radio); >100 km with a relay
ENDURANCE	8–15 min
CEILING	usually <500 m AGL
POWERPLANT	4× brushless, 6S Li-ion pack
GUIDANCE	analogue/digital FPV, operator in the loop
LAUNCH / RECOVERY	hand / ramp
UNIT COST	USD 400–800

A 10-inch frame (about 254 mm motor-to-motor) is the de facto strike-FPV standard. Warhead: a PG-7 round, fragmentation or thermobaric charge of 0.5–2 kg. Ukraine planned 4.5 million units for 2025; 2026 capacity is estimated at 7–20 million, funding permitting. With relays, strikes more than 100 km behind the line have been logged.

UKRAINIAN FRONT · MIDDLE EAST · EXPORT AND PROLIFERATION

FIBRE-OPTIC FPV · 2024–2026

Fibre-optic FPV

EW-proof attack

Ukraine and Russia · AFU; Russian forces (incl. Rubikon)

WINGSPAN / BEAM	8–10" frame
MTOW	1.5–3.2 kg (spool + warhead)
WARHEAD	up to ~2 kg
MAX. SPEED	80–140 km/h
RANGE	15–50 km (UA); up to 65 km (RU, 2026)
ENDURANCE	limited by spool mass
POWERPLANT	4× brushless
GUIDANCE	fibre, operator in the loop
UNIT COST	USD 800–2,500

A fibre spool behind the fuselage replaces the radio. Jamming cannot cut the link, but the cable limits manoeuvre and snags on trees. Ukraine’s MoD had codified 80+ systems by August 2025. Early 2026 typical reach 15–25 km; later 40–50 km, with Russian reports of about 65 km against logistics hubs.

UKRAINIAN FRONT · MIDDLE EAST

Vampire
Ukrainian multi-purpose heavy bomber equipped with a bi-spectral camera for day and night operations

HEAVY MULTIROTOR BOMBERS · 2023–2026

Vampire (SkyFall)

Baba Yaga
Night drops of mines and mortar rounds
Ukraine (SkyFall) · Armed Forces of Ukraine

WINGSPAN / BEAM	hexacopter, arm span ~1.5–2 m
MTOW	about 15–25 kg
PAYLOAD	up to 15 kg
MAX. SPEED	about 40–60 km/h laden
RANGE	up to 20 km
ENDURANCE	25–40 min
CEILING	usually <1,000 m
POWERPLANT	6× brushless, Li-ion
GUIDANCE	radio + FPV/thermal
LAUNCH / RECOVERY	from the ground, reusable
UNIT COST	USD 8–10 thousand

A reusable hexacopter from SkyFall — Ukraine’s largest drone maker. It drops TM-62 mines and 82/120 mm mortar rounds, usually at night, with thermal sights. Tens of sorties per airframe. Cost: USD 8–10 thousand. A non-Chinese version is on the US Blue UAS list. SkyFall also builds the Shrike FPV and the P1-SUN interceptor.

UKRAINIAN FRONT

TACTICAL FIXED-WING ISR · 2021–2026

Leleka-100

Stork-100
National artillery scout
Ukraine (DeViRo) · Armed Forces of Ukraine

LENGTH	1.13 m
WINGSPAN / BEAM	1.98 m
MTOW	5.5 kg
PAYLOAD	EO/IR (~0.8–1 kg)
MAX. SPEED	120–140 km/h
CRUISE SPEED	about 60–70 km/h
RANGE	datalink 45 km; route up to 100–340 km
ENDURANCE	2–2.5 h (LR up to 4 h)
CEILING	1,500 m
POWERPLANT	electric motor, pusher propeller
GUIDANCE	INS/GNSS autopilot, encrypted radio
LAUNCH / RECOVERY	catapult / hand; parachute

Ukraine’s baseline brigade-level reconnaissance monoplane. Kevlar, glass and carbon airframe, pusher propeller. The LR version stretches the datalink to about 90 km. Bungee-catapult launch, parachute or belly recovery.

UKRAINIAN FRONT

TACTICAL FIXED-WING ISR · 2020–2026

A1-CM Furia

Artillery and rocket adjustment
Ukraine (Athlon Avia) · Armed Forces of Ukraine

LENGTH	0.90 m
WINGSPAN / BEAM	2.00 m
MTOW	5.5–6 kg
PAYLOAD	EO/IR, about 1–1.5 kg
MAX. SPEED	up to 130 km/h
CRUISE SPEED	about 65 km/h
RANGE	datalink 50 km; route up to 200 km
ENDURANCE	about 3 h
CEILING	1,200–2,000 m
POWERPLANT	electric
GUIDANCE	INS/GNSS + radio
LAUNCH / RECOVERY	catapult; parachute

A flying-wing glass-fibre airframe. In service since 2020; about 300 complexes. Used to adjust tube and rocket artillery. About 50 km from the control post, route up to 200 km.

UKRAINIAN FRONT

TACTICAL FIXED-WING ISR · 2023–2026

SHARK

Tactical ISR with 30× zoom
Ukraine (Ukrspesystems) · AFU; a line in the United Kingdom

LENGTH	1.65 m
WINGSPAN / BEAM	3.40 m
MTOW	12.5–13.5 kg
PAYLOAD	up to 3.5 kg (USG-231 / 231T)
MAX. SPEED	130–150 km/h
CRUISE SPEED	75–80 km/h
RANGE	datalink 80 km; route ~300 km
ENDURANCE	4 h
CEILING	3,000 m
POWERPLANT	ICE / electric (by series)
GUIDANCE	encrypted radio, INS/GNSS
LAUNCH / RECOVERY	catapult; parachute

Pod-and-twin-boom layout, a camera with 30× optical zoom (90× total). Can watch positions from 5 km. A UK production line — target: up to 1,000 units a month for Ukraine.

UKRAINIAN FRONT · NATO AND THE USA

TACTICAL FIXED-WING ISR · 2022–2026

PD-2

Operational ISR, VTOL variant
Ukraine (Ukrspcsystems) · Armed Forces of Ukraine

LENGTH	2.85 m
WINGSPAN / BEAM	5.00 m
MTOW	55 kg
PAYLOAD	10–11 kg (ISR, optional strike)
MAX. SPEED	140 km/h
CRUISE SPEED	100 km/h
RANGE	datalink 180+ km; route 800–1,100 km
ENDURANCE	8 h (VTOL) / 10 h (fixed-wing)
CEILING	4,500–5,000 m
POWERPLANT	4-stroke petrol
GUIDANCE	180+ km radio, INS/GNSS
LAUNCH / RECOVERY	runway / VTOL / catapult

A larger member of the same family as SHARK. Undercarriage or a vertical-take-off module. Datalink beyond 180 km, 8–10 hours in the air. Optional strike load up to 11 kg — at the front it is used first as a scout.

UKRAINIAN FRONT

MALE / HALE / UCAV · 2020–2026

Bayraktar TB2

Armed MALE, export icon
Türkiye (Baykar) · AFU (early phase); 30+ countries

LENGTH	6.5 m
WINGSPAN / BEAM	12.0 m
MTOW	650–700 kg
PAYLOAD	150 kg (4× MAM-L/C + gimbal)
MAX. SPEED	220 km/h
CRUISE SPEED	130 km/h
RANGE	up to 300 km LOS
ENDURANCE	27 h
CEILING	7,620 m (25,000 ft)
POWERPLANT	Rotax 912, 100 hp, pusher
GUIDANCE	SATCOM / LOS, EO/IR, laser
LAUNCH / RECOVERY	runway
UNIT COST	about USD 5 million per complex

The icon of 2022; on the Ukrainian front it was pushed off the first line by denser air defences. Still central in Africa, the Caucasus and export (30+ operators). Four MAM-L/C missiles under the wings. Endurance up to 27 h.

UKRAINIAN FRONT · AFRICA · MIDDLE EAST · EXPORT AND PROLIFERATION

LOITERING MUNITIONS · 2025–2026

RAM-2X

Medium-range loitering munition
Ukraine · Armed Forces of Ukraine

WINGSPAN / BEAM	X-layout, about 1.5–2 m
MTOW	about 8–12 kg
WARHEAD	about 3–4 kg
MAX. SPEED	about 100–140 km/h
RANGE	30–150 km (by variant)
ENDURANCE	about 40–60 min
POWERPLANT	electric
GUIDANCE	EO, operator in the loop
LAUNCH / RECOVERY	catapult / ramp

Ukraine’s answer to the Lancet: an X-wing, a nose camera, operator in the loop. Strikes into the tactical rear — howitzers, air defences, command posts. Reported reach 30–150 km behind the line, depending on variant and relay.

UKRAINIAN FRONT

LOITERING MUNITIONS · 2022–2026

WB Warmate

Man-portable loitering munition
Poland (WB Group) · AFU, Polish Armed Forces and others

LENGTH	1.10 m
WINGSPAN / BEAM	1.60 m
MTOW	5.3–5.7 kg
WARHEAD	1.4 kg (HE-FRAG / HEAT)
MAX. SPEED	150 km/h
CRUISE SPEED	80 km/h
RANGE	about 30 km
ENDURANCE	50–70 min
CEILING	500 m AGL (typ.)
POWERPLANT	electric
GUIDANCE	EO, operator in the loop
LAUNCH / RECOVERY	pneumatic tube / hand

A Polish infantry loitering munition. HE-FRAG and HEAT warheads. One of the few Western designs of this class widely present in Ukraine. Warmate 2 and TL increase mass and range.

UKRAINIAN FRONT · NATO AND THE USA

LOITERING MUNITIONS · 2022–2026

Switchblade 300

Backpack loitering munition
USA (AeroVironment) · USA, AFU

LENGTH	0.49 m (tube ~0.61 m)
MTOW	about 2.5 kg (system)
WARHEAD	about 0.3 kg, anti-personnel
MAX. SPEED	101 km/h
RANGE	10 km
ENDURANCE	15 min
POWERPLANT	electric, pusher
GUIDANCE	EO, GPS, operator in the loop
LAUNCH / RECOVERY	tube launcher

A tube launcher, system mass about 2.5 kg. Anti-personnel warhead. Used in Ukraine from 2022; limited numbers and a short 15-minute flight meant it never replaced mass FPV. The 400 fills the gap between 300 and 600.

UKRAINIAN FRONT · NATO AND THE USA

LOITERING MUNITIONS · 2023–2026

Switchblade 600

Anti-armour loitering munition
USA (AeroVironment) · USA, AFU

LENGTH	1.30 m
MTOW	22.7 kg
WARHEAD	Javelin-class EFP (~3–5 kg)
MAX. SPEED	185 km/h
RANGE	40+ km (90+ with forward pass)
ENDURANCE	40 min
POWERPLANT	electric
GUIDANCE	EO/IR, GPS, operator in the loop
LAUNCH / RECOVERY	tube / vehicle
UNIT COST	about USD 170 thousand (US Army budget)

A Javelin-class warhead. LASSO / Launched Effects programme. US Army 2026 order: 294 rounds. Budget cost about USD 170 thousand each — an order of magnitude above the Lancet, hence far less massed use.

UKRAINIAN FRONT · NATO AND THE USA

DEEP - STRIKE / OWA · 2024–2026

Fire Point FP-1

Cheap deep strike to 1,600–2,700 km

Ukraine (Fire Point) · AFU, HUR, SBU, SSO

WINGSPAN / BEAM	straight wing, extended variants
MTOW	about 330 kg
PAYLOAD	up to 120 kg
WARHEAD	60–120 kg (FRAG / shaped charge)
MAX. SPEED	205 km/h
CRUISE SPEED	140–180 km/h
RANGE	1,600 km (base); 2,700 km (ER); record ~3,200 km
ENDURANCE	many hours (fuel-dependent)
POWERPLANT	twin-cylinder piston + RATO
GUIDANCE	INS + GNSS with ECCM; Starlink in terminal
LAUNCH / RECOVERY	ramp + solid booster
UNIT COST	about USD 55 thousand

Plywood, foam, glass fibre, twin booms, solid-rocket boost off a ramp. Warhead 60–120 kg. Baseline range 1,600 km; wing-integral tanks stretch it to 2,700 km. On 9 Sep 2026 a strike on Novy Urengoy, about 3,200 km. Cost about USD 55 thousand. More than 5,000 built since Oct 2024. Optional pair of FPV under the wings.

UKRAINIAN FRONT

MEDIUM - RANGE STRIKE · 2025–2026

Fire Point FP-2

Strike into the tactical rear

Ukraine (Fire Point) · Unmanned Systems Forces of Ukraine

MTOW	hundreds of kg class
PAYLOAD	60–120 kg (claims up to 200 kg)
WARHEAD	105 kg / 200 kg (two configs)
RANGE	90–200 km; maker 370–700 km
POWERPLANT	piston
GUIDANCE	INS/GNSS; ATR or RC
LAUNCH / RECOVERY	ramp
UNIT COST	order of EUR 50 thousand (with FP-1)

On 2026 estimates, about 60% of Ukrainian drone strikes in this class. Dual mode: ATR on fixed targets, manual control on movers. Maker’s claim: 105 kg to 370 km or 200 kg to 700 km — not combat-validated. In May 2026, unguided S-5/S-8 rockets from underwing rails.

UKRAINIAN FRONT

DEEP-STRIKE / OWA · 2022-2026

AN-196 Liutyi

Лютий — “Fierce”

Principal deep strike on Russian refineries

Ukraine (Ukroboronprom / Antonov) · HUR / AFU

LENGTH	about 4.4 m
WINGSPAN / BEAM	about 6.7 m
MTOW	about 300 kg
WARHEAD	50 kg (early) / ~75 kg (later)
MAX. SPEED	about 160 km/h
RANGE	1,000–2,000 km
ENDURANCE	many hours
POWERPLANT	piston, pusher propeller
GUIDANCE	INS + GNSS
LAUNCH / RECOVERY	runway / short roll
UNIT COST	> USD 200 thousand

Ukraine’s counterpart to the Shahed, but closer to a small aircraft: conventional layout, undercarriage, pusher prop. Officially 1,000 km and 50 kg; later series about 75 kg and up to 2,000 km. Cost above USD 200 thousand. Germany pledged in 2026 over EUR 100 million for production. INS+GNSS, no widely confirmed terminal seeker.

UKRAINIAN FRONT

JET DRONES AND MISSILE-DRONES · 2025-2026

UAV-290 Palianytsia

Missile-drone against fixed targets

Ukraine (Luch Design Bureau / Ukroboronprom) · Armed Forces of Ukraine

LENGTH	3.5 m
WINGSPAN / BEAM	1.7 m
MTOW	350 kg
WARHEAD	100 kg
MAX. SPEED	up to 800 km/h
CRUISE SPEED	up to 800 km/h
RANGE	650 km
POWERPLANT	turbojet + RATO
GUIDANCE	INS + GPS
LAUNCH / RECOVERY	semi-trailer, solid booster

Official designation UAV-290, confirmed at MSPO 2026 in Kielce. Turbojet, trailer launch with a solid booster. Cruise up to 800 km/h, 100 kg warhead, 650 km range. EW-hardened INS, GPS-corrected. The line between drone and cruise missile is conventional here.

UKRAINIAN FRONT

JET DRONES AND MISSILE-DRONES · 2025–2026

Peklo

Пекло — “Hell”
Fast missile-drone
Ukraine (Ukroboronprom) · HUR / AFU

PAYLOAD	from 23 kg
WARHEAD	23–50 kg
MAX. SPEED	700–1,000 km/h
RANGE	up to 700 km
POWERPLANT	jet / missile-drone
GUIDANCE	INS/GNSS, EW-hardened terminal

Several times faster than Liutyi. Range up to 700 km, warhead 23–50 kg depending on the source, speed 700–1,000 km/h. EW-hardened navigation in the terminal phase. Less massed than the FP-1, but harder for air defences tuned to Gerans to kill.
UKRAINIAN FRONT

DEEP-STRIKE / OWA · 2025–2026

FP-5 Flamingo

6-tonne-class cruise missile
Ukraine (Fire Point) · Navy / AFU

MTOW	about 6 t
WARHEAD	1,150 kg
MAX. SPEED	850–950 km/h
RANGE	up to 3,000 km
POWERPLANT	AI-25TL (turbofan)
GUIDANCE	INS/GNSS (details classified)
LAUNCH / RECOVERY	ground launcher

On the line between drone and cruise missile. AI-25TL engine, mass about 6 t, warhead 1,150 kg — 2.5× a Tomahawk Block V. Range up to 3,000 km, speed 850–950 km/h. Combat debut September 2025, production 2026. Not a cheap OWA: a full-size missile.
UKRAINIAN FRONT

UNCREWED SURFACE VESSELS · 2023–2026

MAGURA V5

Strike and missile USV

Ukraine (UForce / HUR) · Defence Intelligence of Ukraine

LENGTH	5.5 m
WINGSPAN / BEAM	beam about 1.5 m
MTOW	about 1,000 kg
PAYLOAD	300–350 kg; 2× R-73
WARHEAD	up to 320 kg (strike variant)
MAX. SPEED	up to 78 km/h (~42 kn)
RANGE	800 km
ENDURANCE	many hours
POWERPLANT	petrol / diesel
GUIDANCE	satellite + operator in the loop
UNIT COST	about USD 250–280 thousand

The first uncrewed surface vessel to sink a warship; it also downed helicopters with R-73 missiles. Length 5.5 m, range 800 km, payload 300–350 kg. In 2026 a variant launching Shahed interceptors from the deck.

UKRAINIAN FRONT

UNCREWED SURFACE VESSELS · 2025–2026

MAGURA V7

Heavier missile USV

Ukraine (UForce); US licence ReconCraft VII · HUR

LENGTH	7.2 m
PAYLOAD	650 kg; 2× AIM-9 or a CM
MAX. SPEED	about 72 km/h
RANGE	up to 1,000 km
ENDURANCE	48 h – 7 days
POWERPLANT	270 hp diesel
GUIDANCE	satellite, multi-day autonomy

7.2 m, 270 hp diesel, 650 kg payload, two AIM-9s or a cruise missile. Endurance 48 h–7 days with a generator. MAGURA V11: oceanic, up to 18 Sting interceptors. In 2026 a US licence as ReconCraft VII.

UKRAINIAN FRONT · NATO AND THE USA

UNCREWED SURFACE VESSELS · 2023–2026

Sea Baby

Heavy SBU USV

Ukraine (SBU) · SBU / 385th USV battalion

LENGTH	about 5.5–6 m
PAYLOAD	up to 850 kg
WARHEAD	variants with RPV-16 and Grad
MAX. SPEED	up to 90 km/h
RANGE	≥1,000 km
POWERPLANT	ICE
GUIDANCE	satellite + operator

Attacks on the Kerch Bridge, warships, Kinburn. Payload up to 850 kg, range ≥1,000 km, speed up to 90 km/h. Variants with RPV-16 and Grad. 2026: Sub Sea Baby — the first combat underwater attack on a Project 636 (Kilo) submarine.

UKRAINIAN FRONT

INTERCEPTOR DRONES · 2025–2026

Sting (Wild Hornets)

Wild Hornets

The most effective Shahed interceptor

Ukraine (Wild Hornets) · AFU, SBU Alpha, drone air defence

MTOW	several kilograms
WARHEAD	about 400 g
MAX. SPEED	up to 280 km/h
RANGE	AD zone; Starlink control
ENDURANCE	a dozen minutes
CEILING	up to 7 km (record 7,472 m)
POWERPLANT	4× electric motors, 3D-printed airframe
GUIDANCE	FPV / tracking, optional Starlink
UNIT COST	about USD 2,000

A 3D-printed interceptor from Wild Hornets. By June 2026 it had downed about 9,000 Shaheds and Gerberas — Ukraine’s top anti-Shahed hunter for seven months running. Speed up to 280 km/h, ceiling 7 km (higher than the P1-SUN, 70–100 km/h slower). In April 2026 it first launched from a Magura boat — a floating battery of eighteen Stings. Output: over 10,000 a month (March 2026). Cost: about USD 2,000.

UKRAINIAN FRONT

UNCREWED GROUND VEHICLES · 2024–2026

Ratel S / X

Mining and kamikaze UGV

Ukraine (Ratel Robotics) · Armed Forces of Ukraine

LENGTH	about 0.8–1.2 m
MTOW	about 15–30 kg
PAYLOAD	TM-62 mine / charge
RANGE	a few km
POWERPLANT	electric, 4 wheels
GUIDANCE	radio / fibre

A four-wheel robot for mining (TM-62) and suicide runs. August 2026: more than 1,100 missions in a month across the Ratel family. An amphibious version in development. One of the few UGVs with documented mass use, not just a prototype.

UKRAINIAN FRONT

DEEP-STRIKE / OWA · 2021–2026

Shahed-136 / Geran-2

“moped”, Geranium-2

Mass saturating OWA

Iran (HESA); RU production at Alabuga · Iran, Russia, Houthis, Hezbollah, Iraqi militias

LENGTH	3.5 m
WINGSPAN / BEAM	2.5 m
MTOW	200 kg
WARHEAD	50 kg (IR); 50–90 kg (RU)
MAX. SPEED	185 km/h
CRUISE SPEED	about 150–180 km/h
RANGE	1,000–2,500 km (90 kg: ~650 km)
ENDURANCE	about 11–12 h
CEILING	up to 4,000 m
POWERPLANT	Mado MD-550, 4-cyl two-stroke, ~50 hp
GUIDANCE	GNSS + INS; CRPA; Starlink from Jan 2026 (RU)
LAUNCH / RECOVERY	vehicle ramp + RATO
UNIT COST	USD 30–50 thousand (build); IR → RU sale ~193 thousand

A pusher delta, MD-550 engine (~50 hp) — the buzzing “moped”. Iranian warhead about 50 kg; the Russian one can be ballasted to 90 kg at the cost of fuel (range falls to ~650 km). Nominal range 1,000–2,500 km. By March 2026 about 57,000 family launches. Alabuga: ~2,800 Geran-2 a month (Aug 2026). Copied: LUCAS (USA), Papa Delta (Taiwan).

JET DRONES AND MISSILE-DRONES · 2025–2026

Geran-3 / Shahed-238

Jet OWA

Iran / Russia (engines from China per HUR) · Russian forces, Iran

LENGTH	3.5 m
WINGSPAN / BEAM	about 3 m
MTOW	about 380 kg (Shahed-238)
WARHEAD	50–90 kg (incl. thermobaric)
MAX. SPEED	450–600+ km/h
CRUISE SPEED	about 520 km/h (238)
RANGE	620–2,000 km (by version)
CEILING	up to 5,000 m (Geran-5)
POWERPLANT	TJ150 turbojet / Chinese copies
GUIDANCE	INS/GNSS; IR/optical/radar variants
LAUNCH / RECOVERY	ramp + RATO

The 2026 break: jets in daily August salvos. 350 (Jun) → 1,600 (Jul) → 2,800 (Aug). Shahed-238: TJ150 turbojet, cruise about 520 km/h, mass about 380 kg. Geran-5: about 500 km/h, ceiling 5,000 m. Variants with R-60 and Verba against AD helicopters.

UKRAINIAN FRONT · MIDDLE EAST

DECOYS · 2024–2026

Gerbera

Parodiya

Decoy saturating air defences

Russia · Russian Armed Forces

LENGTH	about 2.0 m
WINGSPAN / BEAM	about 2.5 m
MTOW	about 10–20 kg
WARHEAD	none, or small (kamikaze variant)
MAX. SPEED	about 160 km/h
RANGE	up to 600 km
CEILING	about 3,000 m
POWERPLANT	small piston, foam/plywood
GUIDANCE	GNSS (simple)
UNIT COST	a few thousand USD

A cheap foam-and-plywood wing, Geran-shaped. Some fly as pure decoys, some carry a small warhead. In packages with Gerans and cruise missiles it forces air defences to spend missiles worth hundreds of thousands of dollars. Aug 2026 plan: 11,000 of the Geran/Gerbera/Garpia family.

UKRAINIAN FRONT

LOITERING MUNITIONS · 2022–2026

ZALA Lancet-3

The war’s most effective loitering munition

Russia (ZALA / Kalashnikov) · Russian forces; export from Feb 2026

LENGTH	1.65 m
WINGSPAN / BEAM	about 1.2 m (X-layout)
MTOW	12 kg
WARHEAD	3–5 kg (HEAT / HE / TB)
MAX. SPEED	dive >300 km/h
CRUISE SPEED	80–110 km/h
RANGE	40–70 km
ENDURANCE	40–60 min
CEILING	up to 5,000 m
POWERPLANT	electric
GUIDANCE	EO, operator in the loop; cue from Orlan/ZALA
LAUNCH / RECOVERY	catapult / ramp / 1-person launcher
UNIT COST	USD 20–35 thousand

X-layout, nose camera, operator in the loop. HEAT, fragmentation and thermobaric warheads. Dive above 300 km/h. ZALA/Orlan cue, Lancet kills. Export from February 2026. A one-person launcher — series production from Jan 2026. Cost USD 20–35 thousand — far cheaper than Switchblade 600.

UKRAINIAN FRONT · EXPORT AND PROLIFERATION

LOITERING MUNITIONS · 2022–2026

Kub-BLA

Cheaper loitering munition

Russia (ZALA / Kalashnikov) · Russian Armed Forces

LENGTH	0.95 m
WINGSPAN / BEAM	1.20 m
MTOW	about 9–12 kg
WARHEAD	about 3 kg
MAX. SPEED	130 km/h
RANGE	about 15 km
ENDURANCE	about 30 min
CEILING	1,500 m
POWERPLANT	electric
GUIDANCE	GNSS / simple EO

A delta, simpler and cheaper than the Lancet. Warhead about 3 kg, tactical range about 15 km. Used alongside the Lancet where a higher-grade EO seeker is not required.

UKRAINIAN FRONT

TACTICAL FIXED-WING ISR · 2010–2026

Orlan-10 / Orlan-30

The backbone of Russian reconnaissance

Russia (STC) · Russian Armed Forces

LENGTH	1.80 m (Orlan-10)
WINGSPAN / BEAM	3.10 m
MTOW	15–18 kg (10) / about 30 kg (30)
PAYLOAD	up to 5.5 kg ISR; Orlan-30: laser
MAX. SPEED	150 km/h (10) / 170 km/h (30)
CRUISE SPEED	90–110 km/h
RANGE	datalink ~120 km; route up to 600 km
ENDURANCE	up to 16 h
CEILING	5,000–6,000 m
POWERPLANT	two-stroke petrol ~3.5 hp
GUIDANCE	INS/GNSS + radio
LAUNCH / RECOVERY	catapult; parachute

The war’s most important Russian scout. The loop: Orlan/ZALA/SuperCam → artillery / Iskander / Lancet. Endurance up to 16 h, datalink about 120 km. Catapult launch, parachute recovery. Orlan-30 has a laser rangefinder for target designation.

UKRAINIAN FRONT · AFRICA · EXPORT AND PROLIFERATION

FIXED-WING FPV · 2024–2026

Molniya-2

Cheap fixed-wing kamikaze

Russia · Russian Armed Forces

LENGTH	1.50 m
WINGSPAN / BEAM	1.20 m
MTOW	about 5–10 kg
WARHEAD	3–5 kg
MAX. SPEED	190 km/h (interceptor up to 220)
RANGE	about 25–40 km
CEILING	about 3,000 m
POWERPLANT	electric or small piston
GUIDANCE	FPV / GNSS
LAUNCH / RECOVERY	ramp
UNIT COST	USD 500–2,000

Foam and plywood, pusher prop, ramp launch. Massed mid-strike on Ukrainian logistics. An interceptor variant against “Baba Yaga” — up to 220 km/h. Cost around USD 500–2,000. In 2026 one of the most often shot down — and most often launched — cheap monoplanes.

UKRAINIAN FRONT

MALE / HALE / UCAV · 2020–2026

Orion (Inokhodets)

Russian armed MALE

Russia (Kronstadt) · Russian Armed Forces

LENGTH	8.0 m
WINGSPAN / BEAM	16.3 m
MTOW	1,000–1,150 kg
PAYLOAD	200–250 kg
MAX. SPEED	200 km/h
RANGE	about 250 km
ENDURANCE	24 h
CEILING	7,500 m
POWERPLANT	Rotax 914 / analogue, pusher
GUIDANCE	LOS / SATCOM, EO/IR
LAUNCH / RECOVERY	runway

Russia’s only series MALE UCAV. Limited numbers, high risk over Ukrainian air defences — used cautiously, well back. Air-to-ground weapons, endurance up to 24 h. It never played a role comparable to the TB2 in 2022.

UKRAINIAN FRONT

MALE / HALE / UCAV · 2007–2026

MQ-9 Reaper

The West’s number-one MALE

USA (General Atomics) · USA, UK, France, Italy, Netherlands and others

LENGTH	11.0 m
WINGSPAN / BEAM	20.1 m
MTOW	4,760 kg
PAYLOAD	1,746 kg (3,850 lb) — Hellfire, GBU, ISR
MAX. SPEED	482 km/h
CRUISE SPEED	about 370 km/h
RANGE	1,850 km
ENDURANCE	27 h
CEILING	15,240 m (50,000 ft)
POWERPLANT	Honeywell TPE331-10 turboprop
GUIDANCE	SATCOM, EO/IR, radar
LAUNCH / RECOVERY	runway
UNIT COST	about USD 32 million each

Still NATO’s baseline armed UAV (500+ airframes), but shot down by the Houthis — 17–19 aircraft since 2023. Hellfire, GBU, 27+ hours on station. The US is hunting cheaper successors; the Reaper remains the yardstick for TB2, Akinci and Wing Loong.

NATO AND THE USA · MIDDLE EAST · AFRICA · EXPORT AND PROLIFERATION

MALE / HALE / UCAV · 2021–2026

Bayraktar Akıncı

Heavy export UCAV

Türkiye (Baykar) · Türkiye, Mali, Burkina Faso, Sudan (SAF) and others

LENGTH	12.5 m
WINGSPAN / BEAM	20.0 m
MTOW	5,500–6,000 kg
PAYLOAD	1,500 kg, 8 hardpoints
MAX. SPEED	361 km/h
RANGE	7,500 km (ferry)
ENDURANCE	24 h
CEILING	12,192 m (40,000 ft)
POWERPLANT	2× AI-450T or PT6A, ~450 hp each
GUIDANCE	SATCOM, AESA, EO/IR
LAUNCH / RECOVERY	runway

More than 110 airframes at the start of 2026. Twin turboprops (AI-450T or PT6A), 8 hardpoints, AESA radar, 1,500 kg payload. In Sudan — SAF strikes (UN: Yiha III and Akıncı among others). A class above the TB2, cheaper than the Reaper.

EXPORT AND PROLIFERATION · AFRICA · MIDDLE EAST

MALE / HALE / UCAV · 2017–2026

Wing Loong II (GJ-2)

Chinese export MALE

China (AVIC/CAIG) · China, UAE, Saudi Arabia, Libya (LNA), Nigeria and others

LENGTH	11.0 m
WINGSPAN / BEAM	20.5 m
MTOW	4,200 kg
PAYLOAD	480 kg, 6 hardpoints
MAX. SPEED	370 km/h
RANGE	4,000 km (ferry)
ENDURANCE	32 h
CEILING	9,000 m
POWERPLANT	WJ-9A turboprop
GUIDANCE	SATCOM, EO/IR
LAUNCH / RECOVERY	runway

China’s most successful aviation export. Six hardpoints, 480 kg, 32 h. In 2026 Iran shot down a WL-2 near Shiraz. Saudi Arabia: a WL-3 line in Jeddah (~48/year, a contract around USD 5 billion).

EAST ASIA · MIDDLE EAST · AFRICA · EXPORT AND PROLIFERATION

MALE / HALE / UCAV · 2014–2026

CH-4 Rainbow

Cheap MALE without Western restrictions

China (CASC) · Iraq, Saudi Arabia, Nigeria, Sudan and others

LENGTH	8.5 m
WINGSPAN / BEAM	18.0 m
MTOW	1,330 kg
PAYLOAD	345 kg (CH-4) / ~1,000 kg (CH-5)
MAX. SPEED	210–235 km/h
ENDURANCE	30–40 h (CH-4) / up to 60 h (CH-5)
CEILING	7,200–7,500 m
POWERPLANT	piston / turboprop
GUIDANCE	LOS / SATCOM, EO/IR
LAUNCH / RECOVERY	runway
UNIT COST	about USD 1–2 million (CH-4)

CASC’s answer to the Reaper in the USD 1–2 million band. CH-4: 30–40 h, 345 kg. CH-5: up to 60 h and about 1,000 kg. Widely present in Iraq, the Sahel and Sudan — where TB2 and Reaper are politically hard.

MIDDLE EAST · AFRICA · EAST ASIA · EXPORT AND PROLIFERATION

LOITERING MUNITIONS · 2010–2026

IAI Harop

Anti-radiation loitering munition

Israel (IAI) · Israel, Azerbaijan, India, others

LENGTH	2.5 m
WINGSPAN / BEAM	3.0 m
MTOW	135 kg
WARHEAD	16–23 kg
MAX. SPEED	up to 417 km/h
CRUISE SPEED	about 185 km/h
RANGE	up to 1,000 km
ENDURANCE	6–9 h
POWERPLANT	UEL AR731, 37 hp
GUIDANCE	EO/IR + anti-radiation, operator in the loop
LAUNCH / RECOVERY	canister / launcher

The template of loitering munitions. EO/IR and anti-radiation seeker, operator in the loop. Nagorno-Karabakh 2020 — killing air defences. Range up to 1,000 km, endurance up to 9 h. Costlier and rarer than the Lancet, but a different mission: SEAD.

MIDDLE EAST · EXPORT AND PROLIFERATION

MALE / HALE / UCAV · 2010–2026

Elbit Hermes 900

Israel’s MALE workhorse

Israel (Elbit) · Israel, Switzerland, Singapore, Libya and others

LENGTH	8.3 m
WINGSPAN / BEAM	15.0 m
MTOW	1,180 kg
PAYLOAD	350 kg ISR
MAX. SPEED	220 km/h
ENDURANCE	36 h
CEILING	9,144 m (30,000 ft)
POWERPLANT	Rotax 914 piston
GUIDANCE	SATCOM, EO/IR, ELINT
LAUNCH / RECOVERY	runway

Gaza, Lebanon, Iran 2026 — Israel’s baseline MALE. Up to 36 h, 350 kg payload, multi-sensor. Exported to Europe and Asia. Heron TP (Eitan) is larger and plays the HALE role.

MIDDLE EAST · AFRICA · NATO AND THE USA

MALE / HALE / UCAV · 2017–2026

Mohajer-6

Iranian tactical MALE

Iran (Qods) · Iran, proxies, Sudan (SAF), Russia (limited)

LENGTH	about 7 m
WINGSPAN / BEAM	10 m
MTOW	600 kg
PAYLOAD	100 kg (4× Qaem/Almas + gimbal)
MAX. SPEED	200 km/h
RANGE	200 km
ENDURANCE	12 h
CEILING	5,400 m
POWERPLANT	piston, pusher
GUIDANCE	LOS, EO/IR
LAUNCH / RECOVERY	runway

Pod-and-twin-boom, up to four Qaem/Almas missiles. Endurance 12 h, range 200 km. Exported to Sudan and the axis of resistance. In Ukraine, shoot-downs of isolated examples used by Russia have been logged. Ababil is the ancestor of many Hezbollah kamikaze drones.

MIDDLE EAST · AFRICA

STEALTH UCAV · 2024-2026

Bayraktar Kızılelma

Uncrewed fighter
Türkiye (Baykar) · Türkiye (entering service)

LENGTH	14.5 m
WINGSPAN / BEAM	10.0 m
MTOW	8,500 kg
PAYLOAD	1,500 kg
MAX. SPEED	Mach 0.9 (~1,100 km/h)
RANGE	about 930 km
ENDURANCE	5 h
CEILING	13,700 m (45,000 ft)
POWERPLANT	AI-25TLT / AI-322F turbofan
GUIDANCE	AESA, EO/IR, datalink
LAUNCH / RECOVERY	runway / deck

A low-observable jet, AESA radar, carrier-capable. MTOW 8.5 t, payload 1,500 kg, Mach 0.9. Ukrainian AI-25TLT / AI-322F engine, eventually Turkish TEI. In 2025 the first air-to-air shot. Not a Ukrainian-front drone — the next layer.

STEALTH UCAV · 2019-2026

GJ-11 Sharp Sword

Gongji-11, Mysterious Dragon
Stealth UCAV in service
China (Hongdu / Shenyang) · PLAAF (front-line service)

LENGTH	about 12.2 m
WINGSPAN / BEAM	about 14 m
MTOW	est. 10–20 t
PAYLOAD	internal bay, est. ~2,000 kg
MAX. SPEED	high subsonic
RANGE	AD penetration (operational)
POWERPLANT	turbofan, shielded nozzle
GUIDANCE	stealth, datalink, J-20 teaming
LAUNCH / RECOVERY	runway; GJ-21 — deck

The only stealth flying-wing UCAV actually in front-line service (open estimates). Photos in Tibet 2025, teaming with the J-20. Internal bay for bombs and missiles. A naval GJ-21 on the Type 076 carrier is on trials. Length about 12.2 m, span about 14 m — estimated.

EAST ASIA

DEEP-STRIKE / OWA · 2026

LUCAS (FLM-136)

American cheap OWA

USA (SpektreWorks) — reverse-engineered Shahed-136 · USA / CENTCOM

LENGTH	about 3.0 m
WINGSPAN / BEAM	about 2.4 m
MTOW	70–100 kg
WARHEAD	about 20 kg, modular
MAX. SPEED	150–185 km/h (dive 300)
RANGE	about 800 km
ENDURANCE	4–6 h
POWERPLANT	DA-215, 2-cyl 215 cc
GUIDANCE	GPS/INS, datalink, MUSIC mesh
LAUNCH / RECOVERY	catapult / RATO / deck
UNIT COST	about USD 35 thousand (USD 5k at scale)

Low-cost Uncrewed Combat Attack System. First combat use 28 Feb 2026 against Iran (Operation Epic Fury). Lighter than the Shahed (70–100 kg), warhead about 20 kg, range about 800 km. Cost target USD 5–35 thousand. CENTCOM: “essential”. The West watched Gerans for four years — LUCAS is the production answer.

MIDDLE EAST · NATO AND THE USA

INTERCEPTOR DRONES · 2025–2026

WIY Strila

STRILA

Rocket-type interceptor against Shaheds

Ukraine (WIY Drones) · AFU, UA National Guard; German-funded order

LENGTH	550 mm (ready to fly)
WINGSPAN / BEAM	540 mm
MTOW	5.3–5.75 kg
WARHEAD	500–700 g
MAX. SPEED	350–415 km/h
CRUISE SPEED	150–200 km/h
RANGE	14–17 km tactical; 28–34 km max
ENDURANCE	12–15 min
CEILING	up to 6,000 m
POWERPLANT	4× electric, climb 50 m/s
GUIDANCE	radar + EO/IR, GPS-denied in later series
LAUNCH / RECOVERY	eVTOL / from the ground, no rail
UNIT COST	USD 2,292 (Jan 2026; previously 3,317)

Flagship interceptor from Kyiv’s WIY. It looks like a small missile but has four rotors: near-vertical take-off, 50 m/s climb, then the chase. Top speed 350–415 km/h, ceiling 6 km, tactical reach 14–17 km (max 28–34 km). Warhead 500–700 g. Radar cues the operator, who finishes after visual contact — daylight and thermal. Output: about 100 a day. Strila 2 LR adds a solid booster and AI lock even under jamming.

UKRAINIAN FRONT · NATO AND THE USA

INTERCEPTOR DRONES · 2026

WIY SPYS

SPYS HL (hand-launched)

Interceptor against jet Shaheds

Ukraine (WIY Drones) · AFU — first 50 for trials, Jul 2026

WARHEAD	300 g
MAX. SPEED	engagement up to 600 km/h
RANGE	12 km
ENDURANCE	5 min
CEILING	6 km
POWERPLANT	Ukrainian Motor-G motors, WIY electronics
GUIDANCE	EO/IR + autonomous head-on homing
LAUNCH / RECOVERY	from the ground; SPYS HL — by hand

WIY’s answer to jet Gerans that a piston interceptor often cannot catch. Engagement speed up to 600 km/h, range 12 km, five minutes in the air, 300 g warhead, ceiling 6 km. Early units home on a head-on course — the same trick already on Strila. SPYS HL is hand-launched, for columns and sites with no fixed kit. In July 2026 the army took 50 for combat trials; codification follows the statistics.

UKRAINIAN FRONT

INTERCEPTOR DRONES · 2025–2026

SkyFall P1-SUN

P1-SUN Long / Jetkiller

SkyFall’s most numerous interceptor

LENGTH	about 50–60 cm (dart fuselage)
WARHEAD	800 g
MAX. SPEED	300–310 km/h; Jetkiller 370 km/h
RANGE	15–23 km; Long 33 km
ENDURANCE	14–17 min
CEILING	5 km; Long up to 9 km
POWERPLANT	4× electric, modular airframe
GUIDANCE	FPV + AI (Long); network control
LAUNCH / RECOVERY	hand / ground / An-28 / helicopter
UNIT COST	about USD 1,000 (baseline)

A black four-rotor “dart”, flown even over the internet from another country. Baseline: 300–310 km/h, 15–23 km, ceiling 5 km, 800 g warhead, about USD 1,000. The Long (Eurosatory 2026) doubles reach to 33 km and ceiling to 9 km, with onboard AI lock. Jetkiller (Farnborough 2026) hits 370 km/h and is meant to catch jet Shaheds when they throttle back — combat trials claimed a dozen-plus such kills. SkyFall talked of 50,000 a month. In June 2026 a deal with Airbus for Europe’s sky shield. Also launched from An-28s and helicopters.

COMMERCIAL ISR · 2025–2026

PG Robotics Lucky Strike-2

ISR and strike where a Mavic loses the link

Ukraine (PG Robotics, Kyiv) · Armed Forces of Ukraine

PAYLOAD	up to 3 kg
MAX. SPEED	up to 80 km/h
RANGE	up to 15 km
ENDURANCE	up to 46 min
POWERPLANT	electric multirotor
GUIDANCE	FHSS, day/ thermal / 30× zoom
UNIT COST	UAH 1.5–2 m per complex (5 airframes)

Kyiv’s PG Robotics builds multirotors for electronic warfare, not for the show stand. Lucky Strike-2 is meant to replace the Mavic in scouting: up to 46 minutes, 3 kg payload, 15 km, frequency-hopping — if one channel is jammed, it jumps. Three fits: DN (day + thermal), DD (digital zoom), DO (30× optical). Version 2.1 returns by itself after GPS loss. The firm also trains operators from basics to combat use.

UKRAINIAN FRONT

HEAVY MULTIROTOR BOMBERS · 2023–2026

PG Robotics Lucky Strike-1.5

Day bomber and remote mining
Ukraine (PG Robotics) · Armed Forces of Ukraine

PAYLOAD	up to 4 kg
MAX. SPEED	up to 100 km/h
RANGE	10–17 km (load-dependent)
ENDURANCE	20–50 min
POWERPLANT	electric multirotor
GUIDANCE	digital radio, operator in the loop
LAUNCH / RECOVERY	from the ground, reusable

An upgraded day bomber from the Lucky Strike-1, flying since 2023. Payload up to 4 kg, 10–17 km depending on load, 20–50 minutes in the air. Three hardpoints. Used for drops, remote mining, carrying relays, attacking enemy loitering drones and recovering downed machines. The maker promises a night version and a stronger video link. Cheaper to run than one-way FPV, because it comes home.

UKRAINIAN FRONT

FPV KAMIKAZE (RADIO) · 2024–2026

PG Robotics LuckyShot

Stabilised 10-inch kamikaze
Ukraine (PG Robotics) · Armed Forces of Ukraine

WINGSPAN / BEAM	10" carbon frame
PAYLOAD	1.5 kg
MAX. SPEED	100 km/h laden; cruise 60 km/h
RANGE	20 km flight / 15 km tactical
CEILING	up to 500 m
POWERPLANT	4× brushless, 13,500 mAh pack
GUIDANCE	digital video 1.6–2.7 GHz, auto-homing

A NATO-codified 10-inch FPV with a carbon frame and automatic terminal homing. Flight range 20 km, tactical radius 15 km, 1.5 kg payload, 100 km/h laden (cruise 60). Working ceiling 500 m. Digital video and control on 1.6–2.7 GHz with frequency hopping. Meant to share the Lucky Strike interface, so scout and kamikaze run from one set.

UKRAINIAN FRONT

DEEP-STRIKE / OWA · 2023-2026

UJ-26 Bober

Beaver
Early deep-strike on refineries
Ukraine (HUR/ domestic industry) · HUR, Armed Forces of Ukraine

WINGSPAN / BEAM	about 3–4 m
WARHEAD	20–50 kg (incl. KZ-6)
MAX. SPEED	100–150 km/h
RANGE	800–1,000 km
POWERPLANT	piston, pusher, canard layout
GUIDANCE	INS/GNSS, no operator in the loop
UNIT COST	about USD 50 thousand

One of the first Ukrainian long-range drones to fly regularly into Russia. Ultralight-like airframe, 20–50 kg warhead (some KZ-6 shaped charges), about 800–1,000 km, around USD 50 thousand. INS/GNSS waypoints, no operator in the loop — less precise than FPV, but hard to jam. HUR used it against refineries in Ryazan, Saratov and Nizhny Novgorod.

UKRAINIAN FRONT

LOITERING MUNITIONS · 2025-2026

V2U

Autonomous AI loitering munition
Russia · Armed Forces of the Russian Federation

WINGSPAN / BEAM	about 1.2 m
MAX. SPEED	about 60–80 km/h (estimates)
RANGE	about 50 km
POWERPLANT	electric, fixed-wing
GUIDANCE	AI (Jetson), terrain matching; later — no radio

A Russian strike drone with an Nvidia Jetson and terrain-matching navigation. Wingspan about 1.2 m, range around 50 km. It is not fast — the point is to find the target in a picture, with no operator. A different school from the Lancet (human in the loop) and from fibre FPV (a cable). In 2026 it appears beside mass cheap FPV as the layer that is EW-proof because it has no link.

UKRAINIAN FRONT

LOITERING MUNITIONS · 2020–2026

STM KARGU

Rotary kamikaze with swarm features

Turkey (STM) · Turkey and export clients (Libya, Syria, Sahel)

MTOW	about 7 kg
WARHEAD	1.4–1.5 kg (HE / anti-armour)
MAX. SPEED	about 144 km/h
RANGE	about 10 km
ENDURANCE	up to 30 min
POWERPLANT	4× electric motors
GUIDANCE	EO + AI, operator can abort

An infantry quadcopter kamikaze. About 10 km, 1.4–1.5 kg warhead (HE or anti-armour), up to 30 minutes. The operator can abort. STM advertises a swarm mode and automatic target recognition. Used in Libya and Syria; not massed on the Ukrainian front — cheaper FPV rules there. It shows what “NATO-exporter shelf” loitering munitions looked like before the war forced designs at a few hundred dollars.

MIDDLE EAST · AFRICA · EXPORT AND PROLIFERATION

LOITERING MUNITIONS · 2017–2026

UVision Hero-120

Medium-calibre loitering munition

Israel (UVision) · Israel, USMC and others

MTOW	about 12–15 kg
WARHEAD	4.5 kg
RANGE	40–60 km
ENDURANCE	up to 60 min
POWERPLANT	electric, fixed-wing
GUIDANCE	EO/IR, operator in the loop
LAUNCH / RECOVERY	tube launcher

An Israeli “rucksack-plus” loitering munition: about 12–15 kg, 4.5 kg warhead, 40–60 km, up to an hour. Tube launch. Larger than Warmate and Switchblade 300, cheaper and lighter than Switchblade 600. The Western school: one precise round rather than a swarm of cheap FPV. Not massed in Ukraine — too dear for a war of attrition.

MIDDLE EAST · NATO AND THE USA · EXPORT AND PROLIFERATION

INTERCEPTOR DRONES · 2024–2026

Merops (Surveyor)

US interceptor with a parachute

USA (Perennial Autonomy) · AFU; US Army — order ~13,000

MAX. SPEED	>280 km/h
RANGE	AD zone (figures withheld)
POWERPLANT	fixed-wing, X-tail
GUIDANCE	AI + operator; works under EW
LAUNCH / RECOVERY	launcher; parachute recovery
UNIT COST	USD 14–15 thousand per complex

Eric Schmidt’s system: a station, launchers and Surveyor monoplanes with an X-tail. Speed above 280 km/h; AI flies when GPS and radio die. A complex costs USD 14–15 thousand, less in bulk. In Ukraine since 2024; the US Army secretary praised the results. Also launched from An-28s with P1-SUNs — the first such pairing against Shaheds. A different school from Sting and Strila: dearer, but recoverable.

UKRAINIAN FRONT · NATO AND THE USA · MIDDLE EAST

DEEP-STRIKE / OWA · 2024–2026

AQ-400 Scythe

Cheap deep-strike with tandem wings

Ukraine (Terminal Autonomy) · Armed Forces of Ukraine

WARHEAD	32 kg (up to 70 kg at the expense of range)
RANGE	about 750 km
POWERPLANT	piston, tandem wing
GUIDANCE	INS/GNSS, optional EO and operator
LAUNCH / RECOVERY	dolly / rail / undercarriage

A volunteer project that went into series. Box fuselage, tandem wings with endplates — it looks crude, and is meant to. About 750 km with a 32 kg warhead; range falls at 70 kg. INS/GNSS, optional camera and operator when a link exists. Cheaper and simpler than Liutyi, heavier in payload than the early Bober. The Ukrainian school of “plywood and foam”: so long as it flies and goes off in the right place.
